

Elizaveta Kotelnikova

Java/Kotlin Software Engineer

St. Petersburg, Russia | elizaveta1408li@gmail.com | tg: @kotelnikova14 | linkedin.com/in/kotelnikova14
github.com/elizavetakotelnikova

Summary

Software Engineer with hands-on experience building fintech backend solutions at one of the world's largest digital banks. Currently focused on internal infrastructure projects. Always eager to learn new technologies and improve technical skills.

Experience

Java/Kotlin Backend Developer

Oct 2024 - Ongoing

T-Bank (ex. Tinkoff) - one of the world's largest digital banks

- Implemented backend for multiple internal services, reducing operational processing time by up to 3x for critical workflows
- Established event-driven communication and developed REST API integrations with existing bank infrastructure, ensuring interoperability and incorporation of newly developed modules
- Migrated services' data to a centralized Data Warehouse (DWH), improving system reliability and enabling analytics for key business processes
- Owned feature development from translating requirements into technical specs, implementing solutions to handling testing and deployment
- Achieved >70% code coverage by refactoring the test codebase and writing comprehensive unit and integration tests, reducing system defects and enhancing overall stability

Education

ITMO University, BSc in Software Engineering

Sep 2022 - June 2026

Skills

Stack: Java/Kotlin, Spring Framework, Apache Kafka, Gradle

Databases: PostgreSQL, MongoDB

Infrastructure: GitLab CI/CD, Docker, Kubernetes, Linux, Git

Cloud & Storage: Amazon S3

Monitoring & Observability: Grafana, Prometheus

Testing: JUnit, Kotest, WireMock, Mailhog

Additional technologies: OpenAPI, n8n

Projects

Quest service app

itmo-quest-service

- Engineered and deployed backend for a university mini-app using NodeJS, PostgreSQL and Docker
- Designed and implemented a RESTful API that handled all frontend interactions and integrated with VK's platform APIs for user authentication and data retrieval

Networking website

lets-lunch-app

- Engineered a RESTful web service from the ground up that won the hackathon's "Best MVP" prize
- Maintained API contract specifications: produced API docs and usage guides, ensuring clarity and consistency
